LEAD INVESTIGATOR

[REDACTED]

PREPARED FOR

[REDACTED]

Executive Summary

This report presents a structured analysis of the publicly available online footprint associated with the handle

@[REDACTED], provided as the primary investigative starting point. All findings are derived exclusively from open-source, publicly accessible data collected during the investigation window of 01-07 May 2026.

Key Findings Overview

Total Linked Public Profiles Identified	6
Primary Platforms with Activity	X, Reddit, Discord, Steam, GitHub, Twitch
Estimated Level of Exposure	Moderate
Overall Confidence Rating	● HIGH

● High — Corroborated across independent sources.

● Medium — Pattern-based with limited verification.

● Low — Tentative inference.

Summary of Notable Insights

- Network Presence:** The handle @[REDACTED] was confirmed across six platforms with consistent avatar imagery and bio language, indicating a unified, deliberate online identity.
- Geographic Signal:** Posting timestamps, timezone metadata, and geographic references in content align with an AEST-based location, consistent with South East Queensland, Australia.
- Community Focus:** Activity is concentrated within cybersecurity discourse, competitive gaming (specifically FPS titles), and indie software development communities.
- Behavioural Consistency:** Semantic analysis of posts across platforms reveals consistent writing style, vocabulary patterns, and recurring thematic references, supporting a single-author attribution.

Recommendations

"The GitHub profile identified in Section 2 warrants particular attention. Repository commit metadata contains timestamps and, in one instance, a partial email string that may provide further attribution pathways. The Discord handle represents the highest-frequency interaction point and is recommended for ongoing passive monitoring via public server activity."

Section 1 – Starting Information & Scope

Provided Assets

Primary Identifier: @██████████

Contextual Clues: First name ██████ referenced in a Reddit flair; partial avatar recognisable across platforms.

Focus Areas: Identifying physical location region; linking gaming aliases; mapping social network connections.

Scope of Investigation

The investigation spanned major social media platforms, gaming networks (Steam, Twitch, Discord), developer repositories (GitHub), and community forums including Reddit and niche cybersecurity boards. Methodology relies on open-source cross-referencing, semantic pattern analysis, reverse image search, and archival cache review. All findings are restricted to publicly accessible data. No private accounts, restricted communities, or non-public data sources were accessed.

Section 2 – Profile Discovery & Linking

Visual Network Mapping

Profile Inventory

Platform	Handle / Link	Confidence	Notes
X (Twitter)	██████████	● HIGH	Account active since 2021. Matches provided avatar. Bio references Discord handle.
Reddit	██████████	● HIGH	
Discord	██████████	● HIGH	Active in 3 public cybersecurity and gaming servers. Avatar identical to X profile photo.
Steam	██████████	● HIGH	Public profile. Avatar and username match across platforms. Library includes 340+ titles.
GitHub	██████████	● MEDIUM	Probable match based on repository naming conventions and bio phrasing mirroring Reddit profile.
Twitch	██████████	● MEDIUM	Inactive since late 2024. Past stream titles reference same game titles noted on Steam.

Linking Rationalization

"Consistent avatar usage across Steam, Discord, and X — combined with identical bio phrasing and thematic vocabulary on Reddit and GitHub — provides a high-confidence multi-platform attribution. The inclusion of ██████ as a Reddit flair and its use in a 2023 Twitch stream title further corroborates the single-subject linkage. Posting timestamps across all platforms align with AEST (UTC+10/+11), supporting the geographic hypothesis established in Section 4."

Section 3 — Activity & Timeline Analysis

Chronological Activity

2021 – 2022

Initial Footprint Creation

X and Steam accounts created within the same two-month window. Early activity centred on broad gaming discussion and FPS communities. Avatar established and used consistently from account creation.

2023

Expansion into Technical Communities

Reddit account created. Posts shift toward cybersecurity topics, CTF competitions, and local Brisbane tech meetup references. GitHub repository first observed with a small Python utility project. Twitch streams begin and run intermittently for approximately 12 months.

2024

Peak Activity Period

Highest observed posting frequency across all platforms. Discord activity spikes in January and April. Geographic references in Reddit posts become more specific, naming venues in Brisbane's West End and Fortitude Valley. Twitch streaming ceases by November 2024.

2025 – 2026

Current Active Phase

Activity consolidated to Discord and Reddit as primary channels. Most recent post observed within 48 hours of investigation close (05 May 2026). GitHub repository updated with a new commit on 02 May 2026. X engagement reduced but account remains active.

Posting Patterns

ESTIMATED DAILY ACTIVITY DISTRIBUTION (AEST)

- Peak Activity Window:**18:00 – 23:00 AEST (consistent with after-work / evening hours)
- Lowest Activity:** 01:00 – 06:00 AEST (indicative of standard sleep schedule, local timezone)
- Recurring Themes:** Competitive FPS gaming, CTF/cybersecurity challenges, Python scripting, Brisbane local events Technically oriented, concise, occasional Australian colloquialisms; generally neutral
- Writing Tone:**
- Language Signals:** Australian-English spelling conventions (e.g. "colour," "analyse," "arvo") observed across platforms

Section 4 — Contextual Insights

Location & Environmental Clues

- **Primary Timezone:** All observed post timestamps are consistent with AEST / Australian Eastern Standard Time (UTC+10), shifting to AEDT (UTC+11) during daylight saving periods. No anomalies suggesting VPN use or travel were identified.
- **Geographic Indicators:** Three Reddit posts from 2024 reference specific venues and events in Brisbane's West End and Fortitude Valley suburbs. One post mentions attending a "local CTF meetup" consistent with a known Brisbane security community event held in March 2024.
- **Contextual Signals:** Consistent use of Australian-English spelling, references to NRL (National Rugby League) and local weather, and mentions of Australian content creators suggest the subject resides in Australia — most likely the South East Queensland region.
- **Device / Platform Signals:** Reddit post history includes two instances of platform metadata suggesting posting from a mobile device on what appears to be an Australian carrier network (referencing Telstra service disruption in a 2023 post).

Reverse Image Search Results

Analysis was performed on the profile avatar shared consistently across X, Discord, and Steam:

The avatar image was traced to a public portfolio hosted on ArtStation, attributed to a digital artist based in Canada. The image is a commissioned artwork listed as publicly available for use. No direct link between the subject and the artist was established. The use of a commissioned avatar rather than a personal photograph is consistent with deliberate identity management practices.

Behavioural & Semantic Analysis

- **Writing Style:** Sentence structure across Reddit, X, and GitHub README files is consistent. Subject favours short declarative sentences, frequent use of em-dashes, and a preference for lowercase openers in informal posts.
- **Interest Graph:** Primary interests confirmed as cybersecurity (defensive focus), FPS gaming (CS2, Valorant), and software tooling. Secondary interests include electronic music production, inferred from a pinned Spotify playlist link observed on an older version of the X bio (archived Feb 2024).
- **Network Connections:** The subject interacts repeatedly with a cluster of approximately 8–12 accounts across Reddit and Discord who appear to share common interests. Several of these accounts also reference Brisbane-area events, suggesting a real-world social network overlap.

Section 5 — Supporting Evidence

Anonymised Visual Records

EVIDENCE REF 01 — X PROFILE CAPTURE	Captured 03/05/2026
REDACTED SCREENSHOT	
Relevance: Confirms avatar, bio text, and account creation date. Bio contains Discord handle reference ([REDACTED]), providing direct cross-platform link. Account displays 487 followers and 2,310 posts as of capture date.	
EVIDENCE REF 02 — REDDIT PROFILE + FLAIR	Captured 04/05/2026
REDACTED SCREENSHOT	
Relevance: Community flair includes the name "[REDACTED]" Post history visible and consistent with cybersecurity and gaming themes. Subreddit participation includes r/brisbane, r/netsec, r/GlobalOffensive, and r/learnpython.	
EVIDENCE REF 03 — GITHUB REPOSITORY METADATA	Captured 05/05/2026
REDACTED SCREENSHOT	
Relevance: Repository commit on [REDACTED]/2026 contains a partial email string in a config file ([REDACTED]), consistent with first-name attribution from Reddit. README writing style matches observed cross-platform tone. Confirms technical background.	
EVIDENCE REF 04 — STEAM PUBLIC PROFILE	Captured 04/05/2026
REDACTED SCREENSHOT	
Relevance: Avatar and username match X and Discord profiles exactly. Public game library and recent activity visible. Username search returns no alternative accounts, indicating this is the primary Steam identity.	

Section 6 – Conclusion

The subject maintains a moderately visible public online presence across six confirmed or probable platforms. Through the cross-referencing of consistent avatar imagery, repeated handle usage, semantic writing style analysis, and geographic content signals, a high-confidence multi-platform attribution has been established for the identity associated with @██████████.

The available data strongly suggests the subject is an individual named ██████████, located in the South East Queensland region of Australia (most likely Brisbane), with an active background in cybersecurity, competitive gaming, and software development. Activity patterns have been consistent over approximately four years, with no significant gaps or identity-shift indicators observed.

Final Reliability Assessment

Entity Linkage	HIGH
Timeline Accuracy	MEDIUM-HIGH
Location Confidence	MEDIUM

Appendix

Search Parameters

Platforms Searched	X (Twitter), Facebook, Instagram, LinkedIn, Reddit, Discord (public servers), Steam, Roblox, Twitch, GitHub, Epic Games, Battle.net, regional Australian tech forums, Wayback Machine archives.
Tools Used	Standard OSINT search operators, reverse image engines (TinEye, Google Images, Yandex), archival caches (Wayback Machine), username cross-search tools, public metadata readers.
Investigation Window	██████████ 2026 – ██████████ 2026
Limitations	Instagram account could not be verified — profile set to private at time of search. LinkedIn search returned no results for the provided handle. Physical address was not determined and is outside the scope of this engagement.
Data Basis	All findings are based on publicly accessible sources only. No private accounts, restricted communities, or non-public databases were accessed at any point during this investigation.

Confidence Ratings Legend

High — Corroborated across two or more independent sources.	Medium — Pattern-based inference with limited direct verification.	Low — Tentative, single-source, or circumstantial inference only.
